

1. Create a new repository

- log into GitHub
- "New" to create a new repository
- At "Create a new repository" page
 - fill in a name (no spaces)
 - check *Public*
 - check *Initialize this repository with* / "Add a README file"

2. Modify settings to share repository

- Find settings (may be in three-dot menu if your window is narrow)
- *Manage access* tab:
 - "Invite a collaborator": `nee1smith`

3. Add content

Back at your repository main window:

- "Add file" menu, "Create new file"
- Use `quiz1.md` for name of this week's quiz
- Paste in text from quiz instructions
- "Commit changes"

4. Repeat last step for new file

- "Add file" menu, "Create new file"
- Use `nouns1.md` for file name

For Friday, add your class preparation assignment here!
